Site Furniture Placement and Selection

Furniture is just one component in the design of the public realm. Designers should take into consideration the function and goals of the site by focusing on how people will use the location. Navigation patterns and intent to use the amenities within a space are just as important as the aesthetics of the product itself. A flexible product provides countless layout opportunities and can adapt to the site's functional goals.

Key Learnings

- Why Placement Matters
- Product Function and Selection/Product Placement
- Americans with Disabilities Act (ADA) considerations
- Global Alliance for Accessible Technologies and Environments (GAATES) consideration
- Placement recommendations for Bike Racks, Tables & Chairs, and Benches
